NEW HORIZON LECTURE

Communicating in a Virtual Space

AARTI SEKHAR, MD, FSAR

Associate Professor

Department of Radiology and Imaging Sciences, Emory University School of Medicine

Aarti Sekhar, MD is a graduate of Brown University and the University of Massachusetts School of Medicine in Worcester. She completed both her residency in diagnostic radiology and fellowship in abdominal imaging and intervention at Beth Israel Deaconess, Harvard Medical School in Boston, Massachusetts in 2011. That same year she joined the faculty at Emory and established early on her passion for working with trainees, having served as an assistant residency and assistant abdominal fellowship program director.

Dr. Sekhar is a renowned teacher, delivering clinically relevant talks for the SAR as well as SABI; RSNA; and multiple surgical societies in addition to lecturing for the AIRP and ACR education center. She has been named a "Teacher of the Year" at Emory (having been a finalist for the award four additional times!) and has received numerous teaching awards throughout her career. Aarti remains dedicated to resident education, currently serving as Wellness advisor for the residency and as the director of Emory's Global Health Initiative working in Ethiopia.

Everyone is familiar with Aarti's contributions to the SAR- she started the Early Career Committee and helped to start the Resident and Fellows Section, she has won the "Cases for Aces" competition, she produces award winning educational exhibits, and she became an SAR fellow in 2020. Dr. Sekhar is also a fellow of SABI and serves as the member at large on the SABI board of directors. For both of these societies, she has started numerous initiatives to help us communicate, connect and engage more deeply. After seeing her captivating presentations accelerate in effectiveness throughout the pandemic, Dr. Sekhar was invited to present the 2021 SAR New Horizon lecture on "Communicating in a Virtual Space." Her non-work passions include adventure travel, story-telling, and art. Enjoy!

CANNON LECTURE

Gulp: A Conversation with Mary Roach

Given the fixation of many of us in the Society of Abdominal Radiology with all things GI and GU, the 2021 SAR Walter B. Cannon Lecture is a special treat! We have an opportunity to explore the why and how Mary Roach, the author of "Gulp- Adventures on the Alimentary Canal," made her foray into her delightfully witty, often zany, and highly accurate study of the gut. For those not familiar with her writings, read on:

Mary Roach is the author of six New York Times bestsellers, including GRUNT: The Curious Science of Humans at War; STIFF: The Curious Lives of Human Cadavers; and PACKING FOR MARS: The Curious Science of Life in the Void. STIFF has been published in 19 languages, and her second book, SPOOK, was a New York Times Notable Book for 2005. Mary has written for National Geographic, Wired, Discover, New Scientist, and the Journal of Clinical Anatomy, among others. She was guest editor of the 2011 Best American Science and Nature Writing, a finalist for the Royal Society's Winton Prize for Science Books, and a winner of American Engineering Societies' Engineering Journalism Award, in a category for which, let's be honest, she was the sole entrant.
